

# Insupen

EXTR 3 ME

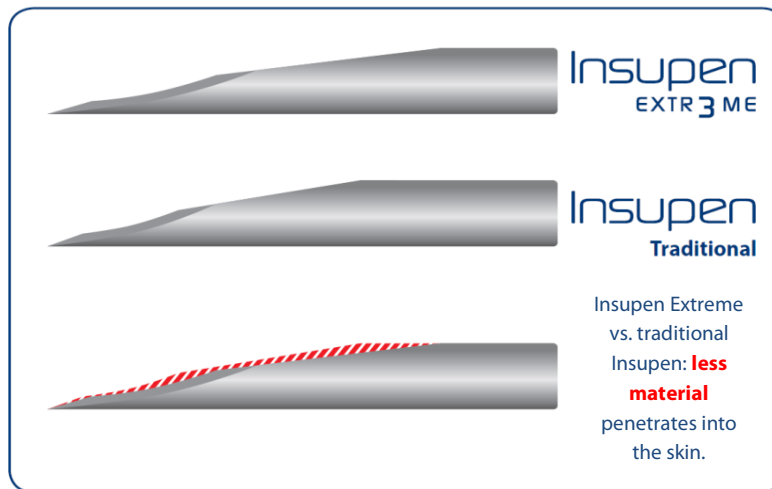

*The New Insupen range: revolutionary injection comfort*

The new **Insupen Extr3me needle geometry** significantly reduces the psychological discomfort linked to injections, minimizing pain and always ensuring effective injections.

The required tip penetration force is reduced by up to 21% and the heel one by up to 16%.

The New Extreme Geometry features **longer, less inclined bevels** and a **sharper tip** in comparison to traditional Insupen needles. This way **less material penetrates into the skin**, thus reducing perceived pain.

 **HIGH FLOW SUPER THIN WALL**

The new **High Flow** increases needle internal diameter thanks to its **Super Thin Wall**. The outer diameter is still the same, but the flow rate dramatically improves while the needle still meets all safety requirements. Available for sizes 33GX4MM and 32GX4MM.
